tanishq-makeover-orai](https://rajavikramaditya.github.io/tanishq-makeover-orai)

# Is guide ko isi order mein padhein

Local bridal studio ke liye log pehle Google Maps par aate hain, phir website par. Isliye kaam ka order fix hai. Beech mein se step mat chunien.

1. **Google Business Profile** — map par naam, pata, photos, reviews.
2. **Google Search Console** — Google ko site ka pata aur kaunse shabd par woh dikhti hai.
3. **Website ki basic setting** — title, sitemap, schema.
4. **Har page ka apna search word** — bridal, package, lehenga.
5. **Reviews aur links** — Instagram, Facebook, Google.
6. **Dataset aur Pixel** — jab ads chalane hon, tab clicks napna.

Do alag kaam hain. SEO se log muft Google search se aate hain. Pixel aur Dataset ads ko batate hain ki kisne WhatsApp dabaya. Pixel ranking nahi laata. SEO ads ko napta nahi.

## 1 Google Business Profile

Orai mein “bridal makeup” search par map ke result website se upar aate hain. Profile pehle se hai: Sparkle Makeover, Hanuman Chabutara, 4.8 rating, 181 reviews. Use poora aur consistent rakhein.

1. **business.google.com** kholen, usi Google account se jispar salon ka profile hai.
2. Naam exactly rakhein: **Sparkle Makeover and Beauty Salon**. Har hafte naam mat badlein.
3. Primary category: **Beauty salon**. Extra category mein bridal makeup / makeup artist jo list mein mile.
4. Pata: Near Hanuman Chabutara, Rajendra Nagar, Orai, Uttar Pradesh 285001. Map pin studio ke gate par ho, mandir par nahi.
5. Phone **+91 80818 17807**. Hours **11:00–20:00, saato din**. Website: <https://rajavikramaditya.github.io/tanishq-makeover-orai/>
6. Photos: logo, cover, 15–20 asli bridal looks, studio, lehenga. Stock photo se bachien.
7. Services mein bridal package aur lehenga booking likhein. Description mein Orai, bridal makeup, lehenga, VLCC-certified artist, WhatsApp.
8. Har nayi review ka chhota jawab dein. Shaadi ke baad bride ko review link bhejein.

Naam, pata, phone teeno jagah same hon: Google profile, website, Instagram bio, Facebook page. Farq padte hi Google confuse hota hai.

## 2 Google Search Console

Yahan pata chalta hai Google ne kaunse page dekhe, kaunse shabd par site dikhi, aur kis page par error hai. Bina iske SEO andha kaam hai.

1. [search.google.com/search-console](https://search.google.com/search-console) kholen.
2. Add property → URL prefix → yeh poora address:  
<https://rajavikramaditya.github.io/tanishq-makeover-orai/>
3. Verify karne ka sabse seedha tareeka: HTML tag. Console jo meta tag de, woh site ke home page ke head mein paste hota hai. (Yeh kaam site ke code mein hota hai.)
4. Verify ke baad **Sitemaps** mein sitemap ka address daalein, jaise hi sitemap file site par ho:  
<https://rajavikramaditya.github.io/tanishq-makeover-orai/sitemap.xml>
5. Har hafte **Performance** dekhein: impressions (kitni baar dikhe), clicks (kitni baar khuli), top queries (kaunse shabd).

**Apna domain** (jaise sparklemakeover.com) GitHub ki lambi link se strong hota hai. Domain aane par Search Console mein naya property banega aur purana redirect hoga. Tab tak isi URL par kaam chalta hai.

### 3 Website ke andar ki setting

Google har page ka title, short description aur structure padhta hai. Sparkle ki site par kuch ho chuka hai, kuch baaki hai.

| Ho chuka hai                                                                                                                                                                   | Abhi baaki hai                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Har page ka title aur description<br>Home par BeautySalon schema: naam, pata, phone, hours, rating<br>Admin page Google se chhupa hai<br>Mobile par site khulti hai, HTTPS hai | sitemap.xml — pages ki list<br>robots.txt — sitemap ka rasta<br>Har page par canonical, poora URL<br>WhatsApp preview image ka poora URL<br>Schema mein website ka poora URL |

#### Inme se har cheez ka kaam

- **Title** — Google ke blue link ka pehla line. Isme sheher aur kaam dono hon. Example: “Bridal packages | Sparkle Makeover, Orai”.
- **Description** — link ke neeche ki 1-2 lines. Seedha jawab: kya milta hai, kahan, kaise book.
- **Sitemap** — Google ko chaaron public pages ki list: home, packages, lehenga, book. Admin is list mein nahi aata.
- **Canonical** — batata hai page ka ek asli address kaunsa hai, taaki same page do baar count na ho.
- **Schema** — salon ka naam, pata, phone, timing machine-readable form mein. Maps aur search dono isse judte hain.
- **Preview image** — WhatsApp par link bhejne par jo photo dikhti hai. Relative path `assets/og-logo.jpg` ki jagah poora URL chahiye.

**Admin page par koi public SEO setting nahi.** Studio desk private hai. Uspar pehle se noindex laga hai. Sitemap aur ads pixel dono se use bahar rakhein.

## 4 Har search ka apna page

Ek page sab shabdon ke liye kaam nahi karta. Jo shabd log type karte hain, uska seedha jawab usi page ki pehli screen par ho.

| Log kya type karte hain                                      | Kaunsa page        | Page par kya dikhe                                     |
|--------------------------------------------------------------|--------------------|--------------------------------------------------------|
| bridal makeup Orai<br>ब्राइडल मेकअप ओराई<br>Sparkle Makeover | Home               | Kaun hai, kahan hai, WhatsApp, packages ki taraf rasta |
| bridal makeup package price Orai<br>ब्राइडल पैकेज ओराई       | Packages           | Package ka naam, kya shamil hai, fee, reference video  |
| lehenga on rent Orai<br>लहंगा बुकिंग ओराई                    | Lehenga            | Photo, video, khali tareekh                            |
| Sparkle Makeover address<br>Hanuman Chabutara makeup         | Home, pata section | Map, raasta, phone, hours                              |

Baad mein alag page tab banayein jab Search Console mein woh shabd dikhne lage: engagement makeup Orai, haldi makeup Orai, sangeet makeup Orai.

**Likhte waqt.** Pehla paragraph sawal ka jawab de. Orai ka naam title mein ho. Asli photo aur asli fee rakhein. Wahi shabd page par bees baar dohrane se ranking nahi badhti.

## 5 Reviews aur links

1. Google review link profile se copy karke, shaadi ke baad bride ko WhatsApp par bhejein. Ek seedha sentence kaafi hai.
2. Instagram **spar.klemakeover** ke bio mein website ka link rakhein.
3. Facebook page ke Website button mein wahi link.
4. Google profile ke website field mein wahi link. Teenon mein farq nahi hona chahiye.
5. Local shaadi vendors (photographer, card, banquet) se sirf tab link lein jab woh asli page ho. Link kharidna ranking giraata hai.

## 6 Har hafte bees minute

| Kahan                         | Kya dekhein                      | Agla faisla                                                           |
|-------------------------------|----------------------------------|-----------------------------------------------------------------------|
| Search Console → Performance  | Impressions, clicks, top queries | Jo shabd dikhta hai aur click nahi hota, us page ka title saaf karein |
| Google profile → Performance  | Calls, direction, website clicks | Photos aur reviews badhte rahein                                      |
| GA4 Realtime (step 8 ke baad) | Aaj kaunsa page khula            | Jo page koi nahi kholta, uska rasta home par saaf karein              |

Pehle kuch hafte movement dheemi rehti hai. Map ke 3 result, website ki ranking se pehle aate hain.

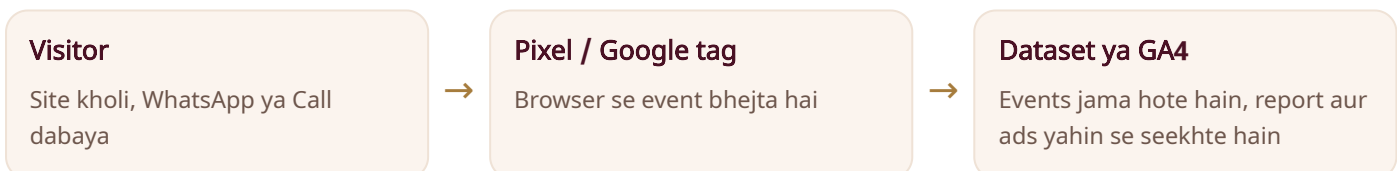

NAPNA

## Dataset aur Pixel — role, phir install

## 7 Yeh cheezein hain kya

Pixel ek chhoti JavaScript line hai jo website ke head mein lagti hai. Koi page kholta hai ya WhatsApp dabata hai, to browser ek note bhejta hai: is visitor ne yeh kiya.

**Dataset** Meta (Facebook / Instagram) ke Events Manager ka folder hai. Pixel usi folder mein events daalta hai. Pehle log ise sirf Pixel kehte the. Ab Meta ne us folder ka naam Dataset kar diya hai. Code mein jo number jaata hai, wahi Pixel ID hai aur wahi Dataset ID hai. Dono ek hi number hote hain.

| Naam           | Kiski cheez hai                                      | Kaam                                                        |
|----------------|------------------------------------------------------|-------------------------------------------------------------|
| Meta Pixel     | Website ka code                                      | PageView, WhatsApp, Call bhejna                             |
| Meta Dataset   | Events Manager ka folder                             | Woh events rakhna, ads ko sikhana ki "aise log aur chahiye" |
| Google tag     | Website ka code. Log ise Google pixel bhi kehte hain | GA4 ko page aur click batana                                |
| GA4            | Google Analytics                                     | Report: kaunsa page khula, phone se aaye ya computer se     |
| Search Console | Google Search                                        | Kaunse shabd par site dikhi. Yeh pixel nahi hai             |

## Inka role, seedhi bhasha mein

- Kaunsa Instagram ya Facebook ad dekh kar site khuli.
- Kitne logon ne WhatsApp dabaya, kitne ne call kiya.
- Ads ko signal milta hai ki in visitors jaisa aur audience chahiye. Isse ad ka kharcha behtar jagah lagta hai.
- GA4 batata hai kaunsa page kaam aa raha hai, bina ad ke bhi.

**Pixel yeh nahi karta.** Google ranking nahi laata. Customer ka WhatsApp message nahi padhta. Booking confirm nahi karta. iPhone ki privacy ki wajah se kuch clicks report mein kam dikhte hain. Agar chats pixel se zyada hon, to numbers toot-mot hain, business nahi.

**Kab lagana hai.** GA4 har studio ke liye useful hai, ads hon ya na hon. Meta Pixel tab lagayein jab Instagram ya Facebook par ad chal raha ho ya chalane wale hon. Google Ads ka alag conversion tab, jab Google par ad chalega. Chaaron public pages par code aata hai. Admin par nahi.

## 8 Meta Dataset aur Pixel install

1. Ads wale Facebook account se **business.facebook.com/events\_manager** kholen. Wahi Business jisme salon ka page aur ad account ho.
2. **Connect data** → **Web** → naya dataset. Naam: **Sparkle Makeover Website**.
3. Setup mein **Meta Pixel** chunein. "Install code manually" chunein. Jo number dikhe use likh kar rakhein.
4. Base code copy karke har public page mein `</head>` se theek pehle paste karein: **index.html**, **packages.html**, **lehenga.html**, **book.html**.
5. **admin.html** par yeh code nahi aayega.
6. Chrome extension **Meta Pixel Helper** lagayein. Site kholen. PageView green hona chahiye.
7. Events Manager → **Test events** → site kholen. PageView ki line aani chahiye. Test ke baad live events 20–30 minute mein dikhte hain.

Base code. `PIXEL_ID` ki jagah apna number:

```
<script>
!function(f,b,e,v,n,t,s){if(f.fbq)return;n=f.fbq=function(){
n.callMethod?n.callMethod.apply(n,arguments):n.queue.push(arguments)};
if(!f._fbq)f._fbq=n;n.push=n;n.loaded=!0;n.version='2.0';n.queue=[];
t=b.createElement(e);t.async=!0;t.src=v;s=b.getElementsByTagName(e)[0];
s.parentNode.insertBefore(t,s)}(window,document,'script',
'https://connect.facebook.net/en_US/fbevents.js');
fbq('init', 'PIXEL_ID');
fbq('track', 'PageView');
</script>
```

## Is site par kaunsa event

Page khulna automatic PageView hai. Button par alag event lagta hai, taaki "WhatsApp dabaya" alag count ho.

| Button             | Event ka naam | Kyun                           |
|--------------------|---------------|--------------------------------|
| Koi bhi page khula | PageView      | Base code khud bhejta hai      |
| WhatsApp           | Contact       | Asli enquiry yahin se hoti hai |
| Call               | Contact       | Phone bhi enquiry hai          |
| Book page          | Lead          | Date dekhne wala banda         |

WhatsApp link par event. Footer ke buttons **app.js** se bante hain, isliye wahan bhi yahi event chahiye.

```
<a href="https://wa.me/918081817807"
  onclick="fbq('track','Contact')">WhatsApp</a>
```

Apna Pixel / Dataset ID: \_\_\_\_\_  
 Lagane ki tareekh: \_\_\_\_\_

## 9 Google tag aur GA4 install

Yeh Google ka napne wala hissa hai. Meta se alag hai. Ads na bhi hon, tab bhi rakhein.

1. **analytics.google.com** → Admin → Create property. Naam: **Sparkle Makeover**. Country India, currency INR.
2. Platform: Web. Stream URL: site ka poora address. Stream ka naam: Sparkle website.
3. **Measurement ID** copy karein. Woh **G-** se shuru hota hai.
4. Google tag wahi chaar public pages ke head mein, Meta code ke paas, paste karein.
5. Apna phone band karke site kholen. GA4 → **Realtime** mein 1 user dikhna chahiye.
6. WhatsApp click ko event banayein, phir use conversion mark karein. Tab report mein "enquiry" alag dikhegi.

```
<script async src="https://www.googletagmanager.com/gtag/js?id=G-XXXXXXX"></script>
<script>
window.dataLayer = window.dataLayer || [];
function gtag(){dataLayer.push(arguments);}
gtag('js', new Date());
gtag('config', 'G-XXXXXXX');
</script>
```

```
<a href="https://wa.me/918081817807"
  onclick="gtag('event','whatsapp_click')">WhatsApp</a>
```

GA4 Measurement ID: \_\_\_\_\_

**Chaar pages hain, isliye seedha code kaafi hai.** Jab pages badh jaayein, Google Tag Manager ek dashboard se Meta aur Google dono tags chalata hai. Abhi Tag Manager se shuruaat karna extra layer hai.

## Dono codes ek saath

Head mein order yeh rakhein: pehle fonts aur site ki apni files, phir Google tag, phir Meta Pixel, phir `</head>`. Ek doosre ko replace nahi karte. GA4 reports ke liye hai. Meta Dataset ads ke liye hai.

Footer mein ek line kaafi hai: "Yeh site visits samajhne ke liye cookies use karti hai." Europe ke customers nahi hain, isliye bada cookie banner abhi zaroori nahi.

YAAD RAKHNE KE LIYE

## Checklist

### SEO

- ☐ Google profile: naam, pin, phone, hours, website, 15 photos
- ☐ Search Console property verify
- ☐ sitemap.xml submit
- ☐ Har public page ka title mein Orai
- ☐ Packages par asli fee, lehenga par asli photo
- ☐ Instagram bio aur Facebook website button mein same link
- ☐ Nayi review ka jawab

### Dataset aur Pixel

- ☐ GA4 property aur Measurement ID
- ☐ Google tag chaaron public pages par, Realtime mein dikha
- ☐ Meta Dataset bana, Pixel ID likh kar rakha
- ☐ Pixel base code chaaron pages par, admin par nahi
- ☐ Pixel Helper mein PageView green
- ☐ WhatsApp aur Call par Contact event
- ☐ Test events mein khud ka click dikha

### Yeh mat kariye

- Backlink kharidna, ya ek page par "bridal makeup Orai" bees baar likhna.
- Google profile ka naam baar baar badalna.
- Nakli reviews.
- Pixel admin page par lagana.

- Pixel ko SEO ka substitute samajhna.
- Alag-alag phone number Google, site aur Instagram par rakhna.

**Is hafte ka order.** Profile check karein. Search Console verify karein. GA4 ka tag lagwayein. Meta Pixel tab, jab ad account ready ho. Site wale code (sitemap, canonical, preview image, tags) ke liye Pixel ID aur GA4 ID saath mein dein, tab woh pages mein lag sakte hain.

---
